Subject: Disposition of 176 disposal wells in CA

Hi Jared,

Based on our current understanding, here is a breakout of the status for 176 wells originally characterized by DOGGR as Class II disposal wells injecting into aquifers with sub-3,000 mg/l TDS:

- 31 wells were determined to be subject to the October 15, 2015 deadline and will be shut-in. [NOTE: DOGGR identified 2 additional wells that require shut-in today that were not on the original list of 176, which is why the total number shutting in pursuant to today's deadline is 33.]
- 19 wells are injecting into an exempt aquifer;
- 15 wells were converted to oil & gas production;
- 44 wells are injecting into hydrocarbon-producing formations and will need an aquifer exemption by February 2017;
- 43 wells are injecting into the 11 HTAE aquifers and will need an aquifer exemption by December 2016; and
- 24 wells were already shut-in.

Let me know if you have any questions, or need any other information.

Thanks,

David
